

ERAN BUHBUT

B.Sc. M.E. Student

PERSONAL INFO:

- Birth date: 11.08.1995
- Nationality: Israeli
- Residence: Haifa, Israel

CONTACT:

LANGUAGES:

- English – Proficient
- Hebrew - Native

SKILLS:

- PTC Creo – Advanced
- SolidWorks - Intermediate
- Python – Basic
- 3D Printing (FDM)
- Microcontrollers

PROFESSIONAL SUMMARY:

Multidisciplinary mechanical engineering student with a passion for automotive technology, robotics and dynamic systems. Strong foundation in CAD, solid mechanics and product design, alongside experience in technical projects and professional media production. Self-driven learning and deep curiosity across engineering domains. Combines hands-on intuition with creativity and structured design.

EDUCATION:

- **B.Sc. in Mechanical Engineering Student, Technion – Israel Institute of Technology | 2023 – Present**
  - Expected Graduation: 2028
  - GPA: 76.6
- **Pre-Academic Preparatory Program Graduate, Technion IIT | 2022 – 2023**
- **High School Graduate, Tefen School (Bagrut Cert.) | 2013**

PROFESSIONAL EXPERIENCE:

- **Research Assistant – T-Sail Lab at Technion | 2026-Present**
  Providing mechanical design of components and mechanisms, along with general engineering support, for fluid mechanics research of agricultural drones.
- **Media Manager – Technion Student Association & Mechanical Engineering Student Committee | 2022–2025**
  Served as creative lead and created promotional campaigns and videos to support student activities and visibility.
- **Independent Media Creator | 2015–2022**
  - End-to-End creation of commercials, infotainment segments, and branded content for motorsport clients and national TV.
  - Published musical compositions with international releases, with recognition from world-level artists.
- **Military Service | 2013 – 2016**
  Honorably discharged at the rank of Staff Sergeant.

TECHNICAL PROJECTS:

- **Technion Formula SAE Project – Monocoque Development Team Member| 2025 - 2026**
  Major contributor to the structural redesign of a carbon-fiber monocoque concept for a 3rd-place FS France entry, addressing potential failure points under bending and torsion and adapting the design for CF manufacturability.
- **CAD, 3D Printing and Mechatronic Projects**
  Designed and 3D-printed functional mechanical devices under academic and self-initiated contexts, with attention to tolerances, reverse engineering, gearing systems and design for printability. More recent projects integrate ESP32 microcontrollers and electronic components into mechatronic systems for robotics and drone applications.
